MARIYAM MUNEER

Junior UI/UX Designer | Product Design

Lahore, Pakistan | +92 309 0830977 | termezimariyam@gmail.com | linkedin.com/in/mariyam-muneer-9874321bb

PROFILE

Junior UI/UX designer with hands-on experience in UX audits, user research, wireframing, interactive prototyping and developer handoff for web and mobile. Led the design work on an academy website and LMS redesign that developers built into a working demo, and designed a personalised web app for a client. My biotechnology background and teaching experience help me explain complex ideas clearly. I use AI tools for speed while owning the design decisions.

SELECTED PROJECTS

MSN Academy – Website Redesign & LMS Portal

Lead designer, two-person intern team | Novik Edge | Remote | Jul–Sep 2026

A vocational tech academy's public website plus a full student LMS: dashboard, course player, assessments, certificates and verification.

60+	5	4 weeks	Built by devs
web + mobile screens	prototype flows	audit to handoff	working demo on Vercel

- **Audit and strategy:** drafted the UX audit with a teammate and wrote the project roadmap, flagging structural issues such as the single-page site and missing pages for client decision.
- **Wireframes to approval:** created the low-fidelity wireframes, then presented and defended the decisions to the project manager with a competitor comparison (including Coursera); the designs were approved.
- **High-fidelity design:** generated screens with AI tools, then manually refined layouts, typography, data, cards and navigation; built reusable components and variants; designed pass, fail and pending states; prototyped the desktop flows.
- **Handoff:** prepared files for developer interns, who built the designs into a working demo on Vercel.

Move Light – Personalised Guided Workout App | Freelance client project

- Held a detailed discussion with the client about her goals, level and constraints, then designed a calm, low-stimulation experience with alternating strength and recovery sessions, accessible any time.
- Designed an auto-guided flow: slow-paced timer, voice and sound cues, a rep counter with +/– adjustment so a missed count does not break focus, short in-app form demos, and a clutter-free interface.
- Built through AI-assisted prompting (Claude, Codex), iterated with the client and deployed on Netlify.

Pickwise – Second-Hand Marketplace App | Independent case study, about 8 weeks

- Ran **5 moderated usability sessions** on a v1 prototype; removed the AI-first Home after 4 of 5 participants found it confusing or intrusive, and redesigned around trust: seller profiles, side-by-side compare, buyer protection and a Help centre.
- Designed about 30 high-fidelity screens across 6 flows (onboarding, search and compare, negotiation, protected checkout, order tracking, selling) with a clickable Figma prototype.

Nourish Lab – Website Concept | Internship practice project

- Designed a 3-page nutrition website with a design system (colour variables, nav and button variants, cards, inputs) and explored 3 themes: Clinical Minimal, Modern Scientific, Vintage Apothecary.

Velora – E-commerce Decision Support Concept | AI-assisted concept

- Explored a "Smart Compare" shopping experience across 5 desktop screens: guided search, results, product detail, side-by-side comparison and shortlist.

EXPERIENCE

UI/UX Design Intern | Novik Edge / MSN Academy | Remote | Jul–Sep 2026

- Took the project from audit to developer handoff in 4 weeks, working with a project manager and a teammate and handling client questions and feedback rounds.
- Collaborated with developer interns during implementation, answering design queries to keep the build faithful to the flows.

Assistant Teacher (primary classes) | Zamir Public School, Multan | 1 year

- Explained concepts in simple language and supported classroom learning; also tutored privately in Biology, Chemistry and Physics.

SKILLS & TOOLS

UX / Product: UX audits, user research and interviews, usability testing, user flows, wireframing, interaction design, prototyping, developer handoff.

Figma: components, variants, auto-layout, variables, design systems, high-fidelity UI, prototyping, Figma Make.

AI-assisted workflow: Figma Make, ChatGPT, Claude, Codex (prompt-driven build and iteration); Notion for documentation.

EDUCATION

BS Biotechnology | Virtual University of Pakistan | Expected February 2027
